

fishing

How to Make: Print the fish pattern page on various colors of cardstock. Then laminate the pieces and cut out. Slide a paper clip in each fish.

Fishing Poles: You can buy fishing poles or make your own. I used small wooden rods I had in my classroom. You can also use a real stick. Then I hot glued a string to one end and tied a magnet to the other end.

I love to sneak in as much math into pretend play as possible!

When students are fishing they can:

- Sort the fish by size
- Sort the fish by color
- Measure the fish
- Count how many they caught or are left in the pond/river
